Mr. Sam Fox
Fox Industries
10 Fox Industrial Park
Madison, Illinois 62060

Dear Sam:

In reference to your letter of June 16, addressed to Ernie Dunnick, please be advised that we do not use hydrated lime for acid neutralization purposes at this plant since our sewer effluent is directed to the Sauget Waste Water Treatment facility.

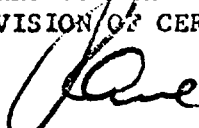

This facility will soon begin trial operations in its recently completed secondary treatment addition, which will consist primarily of neutralization and sludge treatment. I would suggest that you contact the Manager of the treatment plant, Mr. T. W. (Jim) Dalton, telephone 874-3188, who can then tell you whether the hydrated lime you offer is of interest to them.

I am happy to see you back in the family business and hope that we will have occasion to see each other as we did when you were active in the Southern Division of the I.M.A. Incidentally, Ernie Dunnick has recently retired from our company, but I expect he will stay in the St. Louis area.

Best regards.

Yours very truly,

Dear Mr. Dunnick,

Presently I have available approximately 30,000 tons of hydrated lime for your acid neutralization requirements, at a savings of at least 25% of your present delivered price. The quality is equal to commercial grade hydrated lime; however, since ours is ultra fine, it does a better job, especially at ph near 7.

I have asked Mr. Richard Kearns and/or Norman Zaltsman to contact your company concerning its requirements, or you may contact us by phoning my office, 618 451 9287.

Sincerely,

Sam Fox.
